SOURCE EVALUATIONS ARE DEFINITIVE. APPRAISAL OF CONTENT IS TENTATIVE.

Photocopies of the five maps described as follows

50X1-HUM

- a. 1:100,000 geological survey map of Eibenstock and district (2nd edition) (notations in German). Notes on the map indicate that it has been prepared from special geological maps and unpublished material from Wismut A.G. and the Freiberg Office of the East German Geological Commission. The plate was made by Graphische Anstalt, F. Ullmann, G.m.b.H., Zwickau, and the map was printed by VEB Hermann Haack Geographisch-Kartographische Anstalt, Gotha in 1956.
- b. 1:100,000 geological survey map of Altenburg and district (notations in German). Notes on the map indicate that it was prepared from special 1:25,000 maps by A. Watznauer. The plate was made by Graphische Anstalt, F. Ullmann, G.m.b.H., Zwickau, and the map was printed by VEB Kartographie Leipzig in 1954.
- c. 1:100,000 geological survey map of Plauen and district with a separate sheet bearing the legend; the notations and legend are in Russian. The legend and a section from the map have been trimmed off the map and pasted to the back of the original. This has resulted in some of the data's being lost - probably intentionally. Enough remains to show that the map is based on special 1:25,000 geological maps, and that it was printed at the Leipziger Druckhaus. A marginal note states the following: "Genehmigt Ministerium des Innern VIII-K2-0030 vom 28.4.1952".
- d. 1:100,000 geological survey map of Merseburg and district (notations in German).
- e. 1:100,000 geological survey map of Bernburg and district (notations in German). Notes indicate that both maps d. and e., were produced from special 1:25,000 series and 1:200,000 series geological maps by A. Watznauer. The plate was made at the Graphische Anstalt F. Ullmann, G.m.b.H., Zwickau, and the maps were printed by VEB Kartographie Leipzig in 1954.
